Evolution of Ethernet Speeds: What’s New and What’s Next

Greg Hankins <greg.hankins@alcatel-lucent.com>
RIPE 70

Every success has its network

Alcatel·Lucent

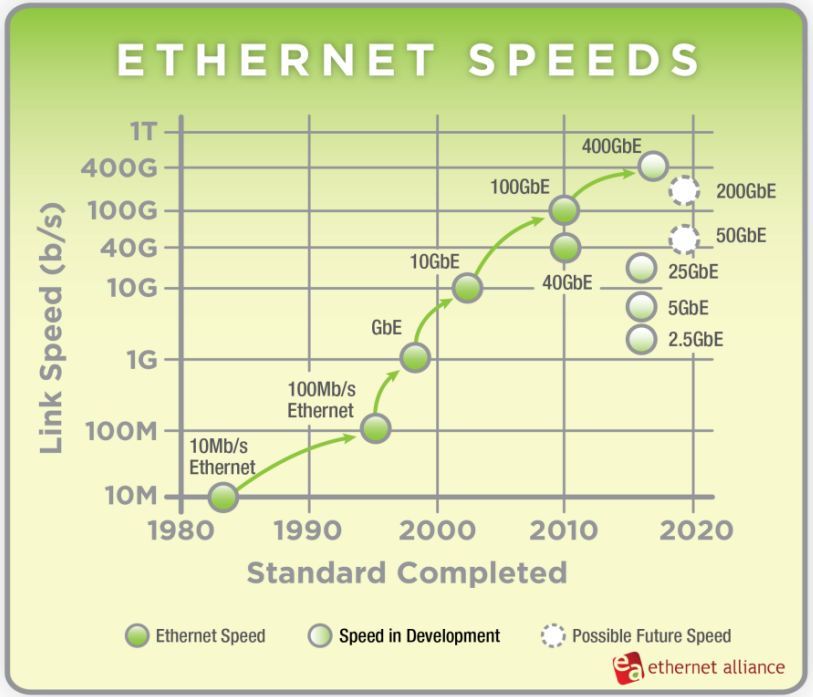
Agenda

1. **Ethernet Speed Evolution**
2. What's Next: 2.5 GE and 5 GE
3. What's Next: 25 GE
4. What's New: 40 GE
5. What's New: 100 GE
6. What's Next: 400 GE

Ethernet Speed Evolution Over 40+ years

New Speeds Driven by Diverse Market Requirements

- Market requirements for Ethernet are changing for different applications
  - Speed
  - Distance
  - Cost
- Different new speeds are needed for
  - Wireless access points: 2.5 GE and 5 GE
  - Servers: 25 GE
  - Core networks: 400 GE
- New Ethernet speeds under development will address these different requirements

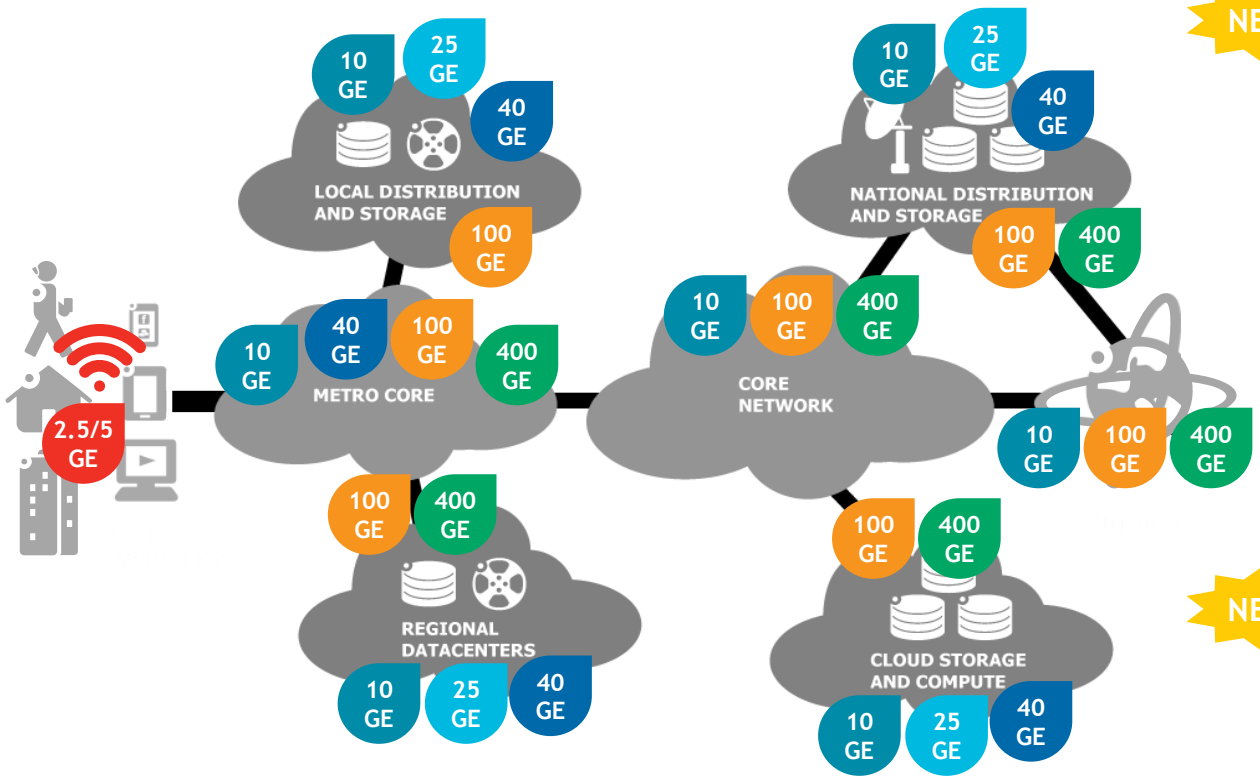


Six New Ethernet Speeds May be Coming Soon – Same Amount as in the Past 30 Years

Roadmap courtesy of the Ethernet Alliance: http://www.ethernetalliance.org/roadmap/

Higher Speed Ethernet Target Applications

Key Application Drivers



NEW **2.5/5 GE Applications (~2016)**

- Higher Speed Wireless
- Large Cat 5e/6 Installed Base

NEW **25 GE Applications (~2016)**

- Data Center Access
- Server NICs

40 GE Applications MORE

- Data Center Aggregation and Core
- Data Center Access
- Server NICs
- Metro Core

100 GE Applications MORE

- Service Provider Aggregation and Core
- Data Center Core
- Metro Core

NEW **400 GE Applications (~2017)**

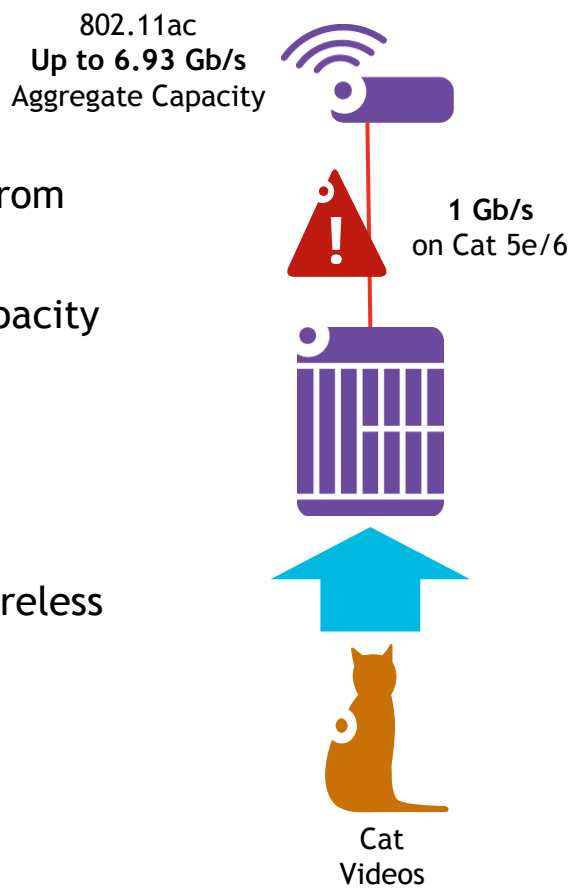
- Service Provider Core
- Large Data Center Core
- Large Metro Core

Agenda

1. Ethernet Speed Evolution
2. **What's Next: 2.5 GE and 5 GE**
3. What's Next: 25 GE
4. What's New: 40 GE
5. What's New: 100 GE
6. What's Next: 400 GE

Market Drivers for 2.5 GE and 5 GE

Higher Speed Wireless

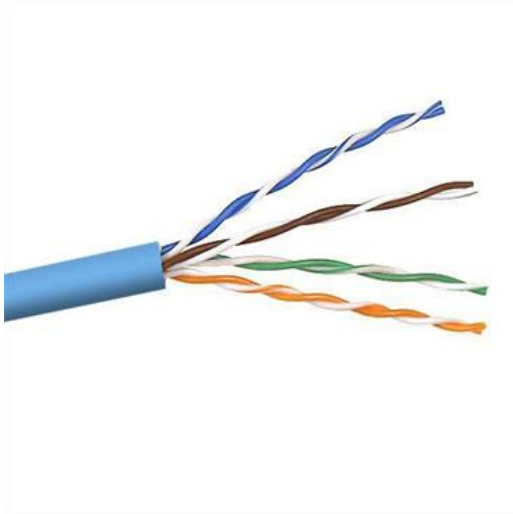


- Wireless access speeds are exceeding the wired connection speed from access points (APs) to the switching infrastructure
- APs are now capable of transmitting multiple Gb/s of aggregate capacity
  - 802.11n (2007+): 600 Mb/s
  - 802.11ac (2013+): 3.47 Gb/s
  - 802.11ac (2017+): 6.93 Gb/s
  - 802.11ax (2019+): 4x faster
- AP's wired connection speed should be at least 75% of maximum wireless speed to avoid throughput bottlenecks
  - Requires wired speeds of 2.5 GE and 5 GE
  - Higher wired speeds require Cat 6A or Cat 8 cabling
  - PoE is also required to power the access points

CFI: http://www.ieee802.org/3/cfi/1114_1/CFI_01_1114.pdf

Market Drivers for 2.5 GE and 5 GE
Large Cabling Installed Base

- Would like to continue to use large installed based of existing Cat 5e/6 at higher speeds than 1 GE
  - 10GBASE-T requires Cat 6A to reach 100 m, or Cat 6 for up to 55 m depending on the installation
  - 25GBASE-T and 40GBASE-T require Cat 8 and are limited to 30 m
- Cat 5e/6 is widely deployed around the world in every type of building
  - BSRIA cabling report from 2003 – 2014 used in IEEE CFI
  - 58 B meters sold world-wide
  - 1282 M (>90%) of installed outlets
- Installed base is not going away anytime soon, and is still growing
- Applications for wireless, desktops, small cell, security, etc



Data source: http://www.ieee802.org/3/NGEBASET/public/jan15/jones_ngeabt_04c_0115.pdf

IEEE P802.3bz 2.5/5GBASE-T Task Force

- IEEE P802.3bz 2.5/5GBASE-T Task Force stared in March 2015
  - 2.5 Gb/s over 100 m Cat 5e (Class D) unshielded twisted-pair copper cabling
  - 5 Gb/s over 100 m Cat 5e (Class D) unshielded twisted-pair copper cabling
  - 5 Gb/s over 100 m Cat 6 (Class E) unshielded twisted-pair copper cabling
  - PoE support including IEEE 802.3bt amendment (4-pair, up to 60 W of power)
  - Optional Energy Efficient Ethernet (EEE) support
- First meeting at IEEE Interim meeting next week
- Standard expected in 2016+
- Interfaces expected on the market in 2016+
- Task Force web page http://www.ieee802.org/3/bz/

2.5 GE and 5 GE Industry Groups

	MGBASE-T Alliance	NBASE-T Alliance
Founded	June 2014	October 2014
Supporters	Component Vendors, System Vendors, Broadcom	Component Vendors, System Vendors, Cisco, !Broadcom
More Information	MGBASE-T Alliance http://www.mgbasetalliance.org/	NBASE-T ALLIANCE http://www.nbaset.org/

Agenda

1. Ethernet Speed Evolution
2. What's Next: 2.5 GE and 5 GE
3. **What's Next: 25 GE**
4. What's New: 40 GE
5. What's New: 100 GE
6. What's Next: 400 GE

Market Drivers for 25 GE

- Provide a server connection speed faster than 10 GE that is optimized for cost, throughput and efficiency
- Maximize efficiency of server connections to access switches in data centers
- Use a single 25 Gb/s signaling lane based on existing 25 Gb/s technology
  - 100 GE for backplanes and copper cables
  - CAUI-4 signaling
  - SFP28, QSFP28, CFP2, CFP4 media modules
  - 100 GE QSFP28 to 4 x 25 GE SFP28 breakout
- But what about 40 GE?
  - Inefficient 4 x 10 Gb/s signaling
  - Higher cost and size of QSFP+ compared to SFP28
  - Market requirement vary, multiple speeds are needed for different applications

CFI: http://www.ieee802.org/3/cfi/0714_1/CFI_01_0714.pdf

25 Gb/s Maximizes Bandwidth and Efficiency

Overall Lower CapEx and OpEx

3.2 Tb/s Switch	Servers	100 GE Uplinks	Capacity (Tb/s)	Utilization (%)	ToR Switches for 100K Servers
25 GE (1 x 25 Gb/s)	96	8	3.2	**100**	**1042**
40 GE (4 x 10 Gb/s)	28	4	1.52	47.5	3572

Port Speed (Gb/s)	Lane Speed (Gb/s)	Lanes per Port	Usable Ports	Total Capacity (Tb/s)
10	10	1	128	1.28
25	25	1	**128**	**3.2**
40	10	4	32	1.28
100	25	4	32	3.2

- Connections to switch ASICs is limited by SERDES count and bandwidth
- Single higher speed 25 Gb/s lanes maximize bandwidth and switch fabric utilization vs. 4 x 10 Gb/s lanes
- A single lane per physical port maximizes the number of connected servers or uplinks per switch
- Overall higher port count, utilization and total server interconnect bandwidth vs. 40 GE

25 GE Developments
Copper and Fiber Optic Cables

- IEEE 25GBASE-T Study Group combined meetings with IEEE P802.3bq 40GBASE-T Task Force
  - 25GBASE-T: 1 x 25 Gb/s over 30 m 4-pair twisted-pair copper cabling (ISO/IEC JTC1 SC25 WG3 and TIA TR-42.7)
  - 25GBASE-T added to P802.3bq standard in November 2014
  - No change in standard schedule for either speed, expected March 2016
- IEEE P802.3by 25 Gb/s Ethernet Task Force started in December 2014
  - 25GBASE-KR: 1 x 25 Gb/s NRZ 25 GBd over 1 m Megtron 6 backplane
  - 25GBASE-CR-S: 1 x 25 Gb/s over 3 m copper twinax cable (no FEC and Base-R FEC)
  - 25GBASE-CR: 1 x 25 Gb/s over 5 m copper twinax cable (superset of 25GBASE-CR-S plus RS FEC)
  - Auto negotiation between 25GBASE-CR-S and 25GBASE-CR and FECs
  - 25GBASE-SR: 1 x 25 Gb/s over 70 m OM3 and 100 m OM4 duplex MMF
  - Optional Energy Efficient Ethernet (EEE) support
  - Draft 0.1 generated
  - Standard expected in September 2016
  - Interfaces expected on the market in 2016+
  - Task Force web page http://www.ieee802.org/3/by/

25 Gigabit Ethernet Consortium

- Founded in July 2014 by Arista, Broadcom, Google, Mellanox and Microsoft after the first 25 GE CFI failed in the IEEE in March 2014
- Developing 25 GE and 50 GE standards outside of IEEE
  - 25 GE: 1 x 25 Gb/s
  - 50 GE: 2 x 25 Gb/s
  - Based on 100GBASE-KR4 and 100GBASE-CR4
- Optional FEC modes
- Optional auto-negotiation
- Specifications only for backplane and twinax copper cable, but does not address or preclude active optical cable or fiber interfaces
- Full draft 1.4 specification only available to members
- More information at http://25gethernet.org/

CFI: http://www.ieee802.org/3/cfi/0314_3/CFI_03_0314.pdf

40 Gb/s QSFP+ Modules Overview

Quad Small Form-factor Pluggable+

- Created for high density interfaces primarily short reach interfaces for data center applications
  - Small compact form factor enables low power consumption and high density
  - Also used for longer reach 40 GE
- Used for a variety of Ethernet, Fibre Channel and InfiniBand applications
  - 40 GE uses 4 x 10 Gb/s bidirectional channels
- Supports a variety of copper and fiber 40 GE interfaces
  - Breakout from 40 GE to 4 x 10 GE
- Same faceplate size as an XFP but slightly shorter

1 - 4 Premium Ports/Slot CXP and CFP Modules	4 – 8 High Cost Ports/Slot CFP2 Modules	4 - 32 Lower Cost Ports/Slot QSFP28 and CFP4 Modules	High Density Low Cost Ports	High Density Commodity Ports Theoretical 100 GE SFP

1st Generation	2nd Generation	3rd Generation

Pluggable module images courtesy of Finisar. Adoption lifecycle curve based on "Crossing the Chasm" by Geoffrey Moore.

1st Generation 100 GE

- Fundamental 1st generation technology constraints limit higher 100 GE density and lower cost
- Electrical signaling to the CFP
  - 100 Gb/s Attachment Unit Interface (CAUI) uses 10 x 10 Gb/s lanes (CAUI-10)
- Optical signaling on the media
  - 100GBASE-SR10: 10 x 10 Gb/s parallel
  - 10x10 MSA: 10 x 10 Gb/s λs
  - 100GBASE-LR4 and 100GBASE-ER4: 4 x 25 Gb/s λs
- CFP module size, complexity and power consumption
- 2nd generation modules based on 4 x 25 Gb/s electrical signaling are available now

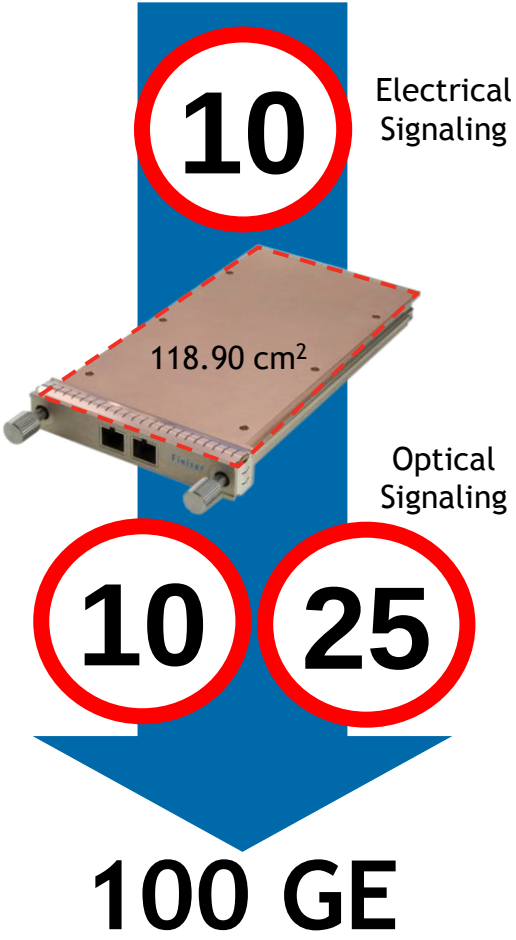

Image courtesy of Finisar.

100 GE Developments
Fiber Optic Cables

- IEEE P802.3bm 40 Gb/s and 100 Gb/s Operation Over Fiber Optic Cables Task Force started in September 2012
  - 40GBASE-ER4: 4 x 10 Gb/s over 40 km SMF
  - 100GBASE-SR4: 4 x 25 Gb/s over 70 m OM3 and 100 m OM4 parallel MMF
  - ~~4 x 25 Gb/s over 20 m MMF~~
    - Removed because there is not enough economic or technical advantage vs. existing MMF alternatives
  - ~~4 x 25 Gb/s over 500 m SMF~~
    - Removed due to lack of industry consensus that any of the proposals (CWDM, DMT, PAM-n, PSM4) provided sufficient size, cost and power reduction vs. existing SMF alternatives
  - CAUI-4 electrical signaling to the CFP2, CFP4 and QSFP28
  - Optional Energy Efficient Ethernet (EEE) support for 40 GE and 100 GE fiber interfaces
- IEEE Std 802.3bm-2015 approved on February 17, 2015

Ethernet at Terabit Speeds Becomes Feasible

CDFP image courtesy of the CDFP MSA. CFP2 image courtesy of Finisar.

Ethernet Speed Evolution Futures

- Ethernet continues to evolve to meet new and diverse market requirements
- Different new speeds are needed for different new applications
- Old 10x performance for 3x cost model doesn't work anymore as we get to higher speeds
  - 10 ME ⇨ 100 ME ⇨ 1 GE ⇨ 10 GE ⇨ 100 GE
- Current best technical and economic solutions are 4x to 8x the highest lane rate
  - 4 x 10 Gb/s for 40 GE
  - 4 x 25 Gb/s for 100 GE
  - 8 x 50 Gb/s for 400 GE
- New technology based on 50 Gb/s could be the basis of a new generation of speeds
  - 1 x 50 Gb/s for 50 GE
  - 4 x 50 Gb/s for 200 GE

Ethernet Speed Evolution Summary

- 2.5 GE and 5 GE is coming soon for higher speed Cat 5e/6 applications
- 10 GE is being widely deployed in every part of the network
- 25 GE is coming soon for server and ToR applications
- 40 GE is increasingly deployed in data center networks
  - Popular for 40 GE and 4 x 10 GE breakout
- 100 GE has transitioned to 2nd generation technology with CFP2, CFP4 and QSFP28
  - Still at least a generation away from 100 Gb/s serial signaling
- 400 GE development is well under way and will leverage 100 GE technology
- Ethernet at Terabit speeds is still unfeasible in the near future, but we'll get there eventually (2020+)

Key Industry Developments for the Next Couple of Years

Making Ethernet Faster and Cheaper

Ethernet Standards

- P802.3bz 2.5/5GBASE-T Task Force
- P802.3by 25 Gb/s Ethernet Task Force, 25GBASE-T Study Group
- P802.3bq 40GBASE-T Task Force
- P802.3bs 400 Gb/s Ethernet Task Force

Ethernet MSAs and Consortiums

- 10x10: 2 km, 10 km, 40 km
- PSM4: 500 m
- CWDM4: 2 km
- CLR4: 2 km
- OpenOptics: 2+ km
- NBASE-T and MGBASE-T Alliance: 2.5 GE and 5 GE
- 25 Gigabit Ethernet Consortium: 25 GE and 50 GE

Pluggable Module MSAs

Next Generation Form Factors

- CFP4 (100 GE)
- QSFP28 (100 GE)
- CDFP (400 GE)

Component Standards

Electrical Signaling from ASICs to Pluggable Modules

- 25 Gb/s (CEI-28G-VSR)
- 50 Gb/s (CEI-56G-VSR)

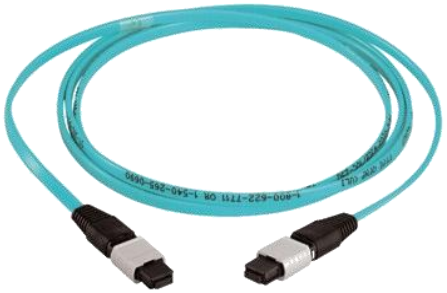
"MSA" means Multisource Agreement.

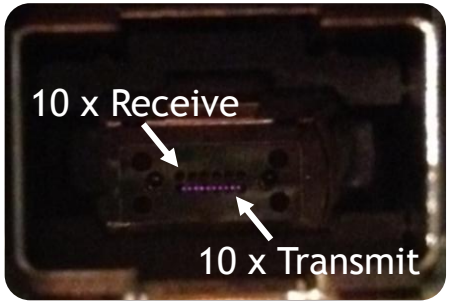
MPO Cable Assemblies

High Density Ribbon Fiber Cabling

- 40 GE and 100 GE short reach pluggable modules use a multifiber push on (MPO) cable assembly to interconnect network devices
  - Also called MTP by US Conec
- Widely available in a variety of high density multimode fiber (MMF) and single-mode fiber (SMF) cabling options for data centers
  - MPO to MPO
  - MPO cassette for patch panels with into LC, SC, etc
  - Keyed connectors maintain correct transmit/receive orientation
- 40GBASE-SR4 uses a 12-fiber OM3 or OM4 MMF MPO cable
  - 8 fibers used, left 4 for transmit and right 4 for receive
  - 4 middle fibers are unused
- 100GBASE-SR10 uses a 24-fiber OM3 or OM4 MMF MPO cable
  - 20 fibers used, top middle 10 for receive and bottom middle 10 for transmit
  - 2 fibers on each end are unused

12-Fiber MPO Cable Connector

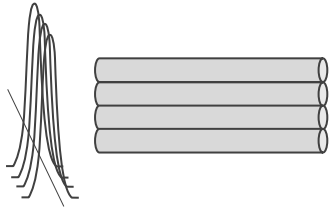




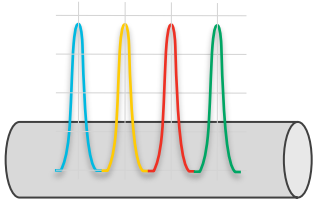
100GBASE-SR10 CXP

40 GE Transmission
Multimode and Single-mode Fiber

- Multimode ribbon fiber
  - Used for distances of 100 m on OM3 and 150 m on OM4 MMF
  - Data is sent using multiple 850 nm lasers transmitting over multiple parallel fibers
  - MPO cables provide multiple separate transmit and receive strands of multimode fiber in a ribbon cable assembly
- Single-mode duplex fiber
  - Used for distances of 2 km, 10 km and 40 km on standard duplex SMF
  - WDM component in the pluggable module multiplexes four transmit λs over one strand of fiber and four receive λs over the other strand of fiber in the 1310 nm CWDM band for 40GBASE-LR4 and 40GBASE-ER4
  - 40 Gb/s serial transmit over one strand of fiber and receive over the other strand of fiber on one 1550 nm λ is used for 40GBASE-FR



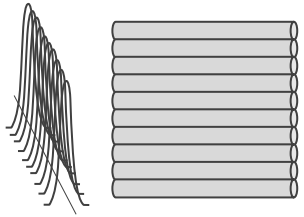
4 x 10 Gb/s Over Parallel MMF
40GBASE-SR4



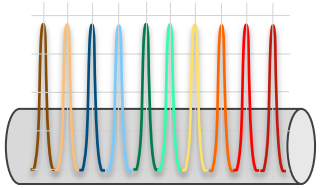
4 x 10 Gb/s Over Duplex SMF
40GBASE-LR4 and 40GBASE-ER4

100 GE Transmission
Multimode and Single-mode Fiber

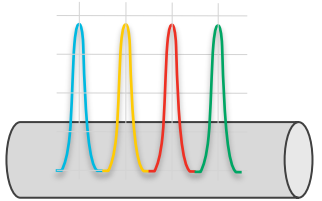
- Multimode ribbon fiber
  - Used for distances of 100 m on OM3 and 150 m on OM4 MMF
  - Data is sent using multiple 850 nm lasers transmitting over multiple parallel fibers
  - MPO cables provide multiple separate transmit and receive strands of multimode fiber in a ribbon cable assembly
- Single-mode duplex fiber
  - Used for distances of 2 km, 10 km and 40 km on standard duplex SMF
  - WDM component in the pluggable module multiplexes all transmit λs over one strand of fiber and all receive λs over the other strand of fiber
    - 10x10 MSA standards use 10 x 10 Gb/s λs in the 1550 nm DWDM band
    - IEEE standards use 4 x 25 Gb/s λs in the 1310 nm CWDM band



10 x 10 Gb/s Over Parallel MMF
100GBASE-SR10



10 x 10 Gb/s Over Duplex SMF
10x10-2km, 10x10-10km and 10x10-40km

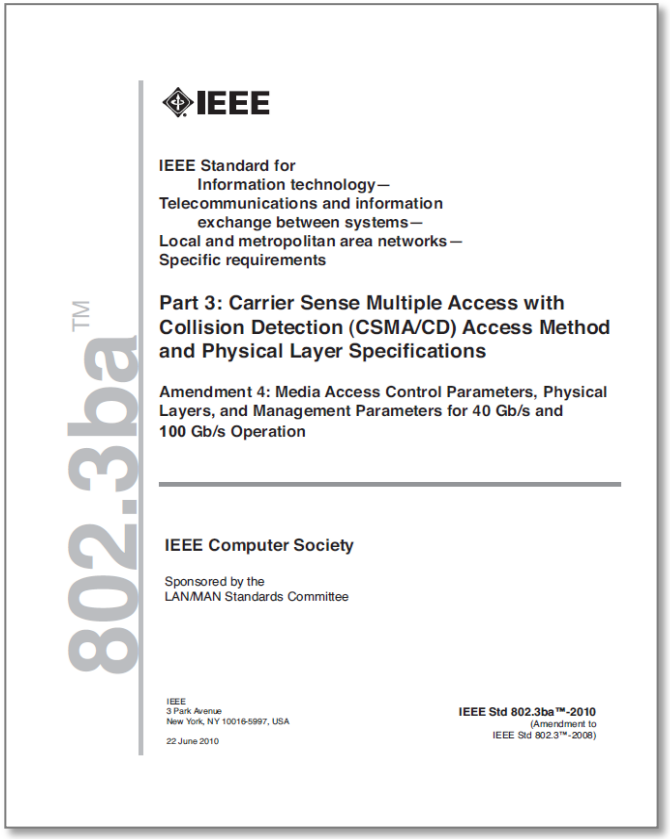


4 x 25 Gb/s Over Duplex SMF
100GBASE-LR4 and 100GBASE-ER4

Ethernet Standards Development Summary

Continuing Technology Evolution

- IEEE 802.3ba-2010 standard for 40 GE and 100 GE approved June 17, 2010
  - 340 pages added to IEEE Std 802.3-2012
- Shipping 1st generation media, test equipment, router interfaces, and optical transport gear in 2011/2012
  - Mature, interoperable technology with broad vendor support
- 2nd generation technology is finished and available on the market now
- 400 GE under development as the next Ethernet speed
  - Expected on the market in 2017+



100 GE Developments
Backplane and Copper Cable

- IEEE P802.3bj 100 Gb/s Backplane and Copper Cable Task Force started in September 2011
  - 100GBASE-KR4: 4 x 25 Gb/s NRZ 25 GBd over 1 m Megtron 6 backplane
  - 100GBASE-KP4: 4 x 25 Gb/s PAM-4 12.5 GBd over 1 m enhanced FR4 backplane
  - 100GBASE-CR4: 4 x 25 Gb/s over 5 m copper twinax cable
  - Optional Energy Efficient Ethernet (EEE) operation for 40 GE and 100 GE backplane links and copper cable interfaces
- IEEE Std 802.3bj-2014 approved on June 12, 2014

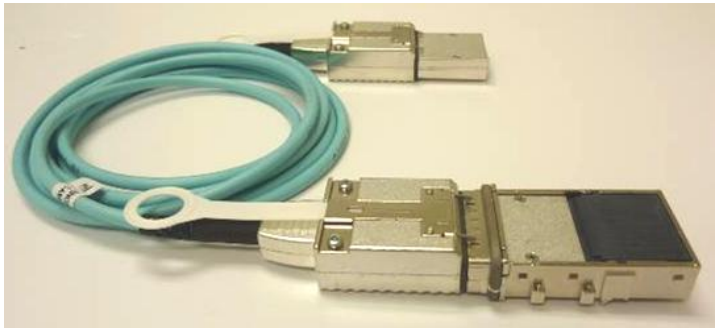
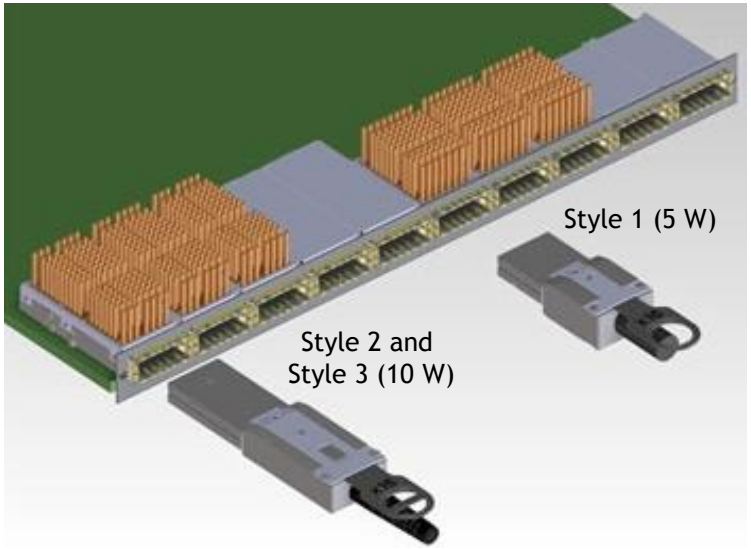
400 Gb/s CDFP Module Overview

Designed to Support 4 Tb/s Per Slot





- CD = 400 in Roman numerals, C = 100 and D = 500
- Optimized for short reaches and targeted for distances up to 500 m
- Supports copper cables, active optical cables and transceivers
