Best Current Operational Practices

Documented best practices for Engineers by Engineers.

About BCOP

NANOG provides and maintains a wiki for the community based project, Best Current Operational Practice (BCOP) aimed at collecting the best practices known within the operations community and capturing those practices in a series of documents. These "living documents" are peer reviewed by community technology experts who actually deploy and manage these environments. We believe the best documentation is when it is based on real-world implementations. This is a community project and is open to all to participate and get involved. We welcome your participation and look forward to working together to build better documentation for the entire community. To learn more about what we're doing here and how, including our purpose, philosophy, scope, principles, criteria, and process, read the NANOG-BCOP-DP.

Join Us

Join the conversation!

This grass-roots, bottom-up, for engineers by engineers effort only works because of the involvement of people like you. Please jump in and help out where you can.

- Subscribe to the BCOP Mail List at http://mailman.nanog.org/mailman/listinfo/bcop
- Questions or suggestions about BCOP should be directed to bcop-support at mailman dot org

New BCOP: Ethernet OAM

- General Ethernet OAM Orientation and Guidelines
  - can be followed by any network operator
  - focus is on understanding EOAM technologies.
- Shepard: Mark Calkins
- Subject Matter Expert(s) (SME):
  - Jean-Francois Levesque
  - Voitek Kozack
  - Mark Calkins

Draft BCOPs in Progress

- EBGP Configuration
  - eBGP interconnection and stewardship methodologies
- Public Peering Exchange Participant
  - Update to BCOP-Exchange Points v2
  - Focus on tenants (*Euro-IX BCOP for Ops*)
- DDoS/DoS Attack
  - what to do before, during and after a DDoS/DoS attack

- Will be presented at NANOG 64
  - 1-3 June, 2015
